

香港地貌岩石保育協會  
Association for Geoconservation, Hong Kong

# 岩石保護約章

## Geoconservation Protocol

1. To reckon rocks and landforms are the primary base of all ecosystems. To protect rocks and landforms is to protect the habitat of all living organisms.
2. To reckon protection of rocks and landforms is a more macro and holistic protection of the environment. It brings maximum benefit by considering the entire ecosystem and the complex relationships between each element.
3. To support Hong Kong Nature Conservation Policy should cover protection of rocks and landforms.
4. To support Hong Kong should formulate rocks and landforms protection legislation.
5. To support Hong Kong Environmental Impact Assessment should formulate clear and specific criteria to assess impacts of development plans on rocks and landscapes in order to attain overall environmental assessment.
6. To support the strengthening of rocks and landforms laws and enforcement, to severely punish illegal reclamation, filling, extraction, removal, destruction or defacing any rocks、fossils、minerals and earth. To assist the Government and environmental groups to report any illegal acts.
7. To participate in civic education and rock protection activities, set a good example for building a better environment.
